PROMETHEUS
— MMXXI —

Executive Summary

The Prometheus team's message is a simple one. Doing good for our investors, and for those less privileged than ourselves. We're not looking to revolutionise cryptocurrency as you know it – we are looking to build upon what is already available. This means we will be actively looking for and improving technology that (by industry standards) is desperately crying out for change, while producing our own NFTs on ERC-20 whilst having a project based on the Binance Smart Chain (BSC). If we see something that hasn't been done yet and will fill a need, however, we'll make that too.

We see a common problem within the industry, and that is where there is a lot of dishonesty and bad faith amongst investors and the developers/token creators – either due to unfulfilled promises or simply neglect, and at worst, scams. This is especially true in the BSC.

We're here to change that.

Our first release of NFTs is being developed now, even (at the time of writing) before launching our namesake token. This will be followed by the development of our NFT inclusive game, with proof of development at every stage. This takes the burden of proof from our investors, because at Prometheus, we prove that our technology and NFTs are being worked on before we announce it. This means that investors are secure that the project they have put money in will be relevant and innovative for years to come.

Naturally, this isn't only about creating fantastic NFTs, improving technology that's already available or even creating our own – it's about creating change, and pursuing what cryptocurrency truly is – freedom from large scale manipulation from centralised bodies and the prevention of counterfeiting. It is also a canvas for change because our investors will know that while we also bring technology into the fold, we will also change the way the world views crypto assets.

This will be done through real world use – such as funding research into cancer care, creating outreach programs and more.

Our Team

The Prometheus team is a tight-knit, talented group with a shared vision of delivering on their promises and ensuring great results for investors, whilst growing our tech presence in the Binance Smart Chain with constant releases and the development of new use cases.

We're proud of the team we've built – with experience across the board in established industries, such as legal, graphic design, entrepreneurship, tech development and marketing. Prometheus defines itself by bringing together talented people with the passion to innovate the Cryptocurrency industry. All our developers are unique individuals who are united by a set of three core values that apply to everything we do.

Be Bold: Be proactive in the community while making effective decisions. We take responsibility alongside our investors in ensuring the success of our token by trying new things and taking initiative.

Be Together: Our team plays an active role in the project, supporting our investors and collaborating with others.

Be Better: We strive to outperform our competitors in work ethic and community involvement. With our rewards based approach to community growth, we will always give back to the community that helps us grow as a project.

Building, developing, training, retaining and engaging the Prometheus community is a daily commitment. We work hard every day to make sure that our developers are supported and empowered to deliver exceptional results for our investors.

Tokenomics

CAKE reward contracts function in specific ways, which are outlined briefly below:
     •Requiring sufficient volume in order to pay CAKE rewards (e.g. the more trades, buys and sells that occur during the accumulation period, the greater the CAKE rewards distributed), and;

     •Auto-distribution, a function which distributes CAKE based on how long the contract is told to pay out, assuming that volume of accumulated cake is sufficient to pay out. In this case, it is every hour that the accumulation period ends (unless the volume is too low, in which case the accumulated CAKE rewards are added to the next accumulation period).

With CAKE rewards tokens, selling is not a requirement - simply waiting for your initial investment to accumulate is enough.
What makes us unique?

Part of the Prometheus message is excellence beyond the contract tokenomics. Whilst rewards and profit play a large (if not absolute) role in investor's decisions to buy into a token, it is not our rewards system that should appeal to our investors – it is our commitment to producing real technology and revenue-producing NFTs, games and more, which is fed back to the token to increase it's value and retain volume over time.
9% CAKE Tax

5% to Marketing & Development Wallet

1% to Liquidity

4% to Charity & Buyback Wallet

Charity
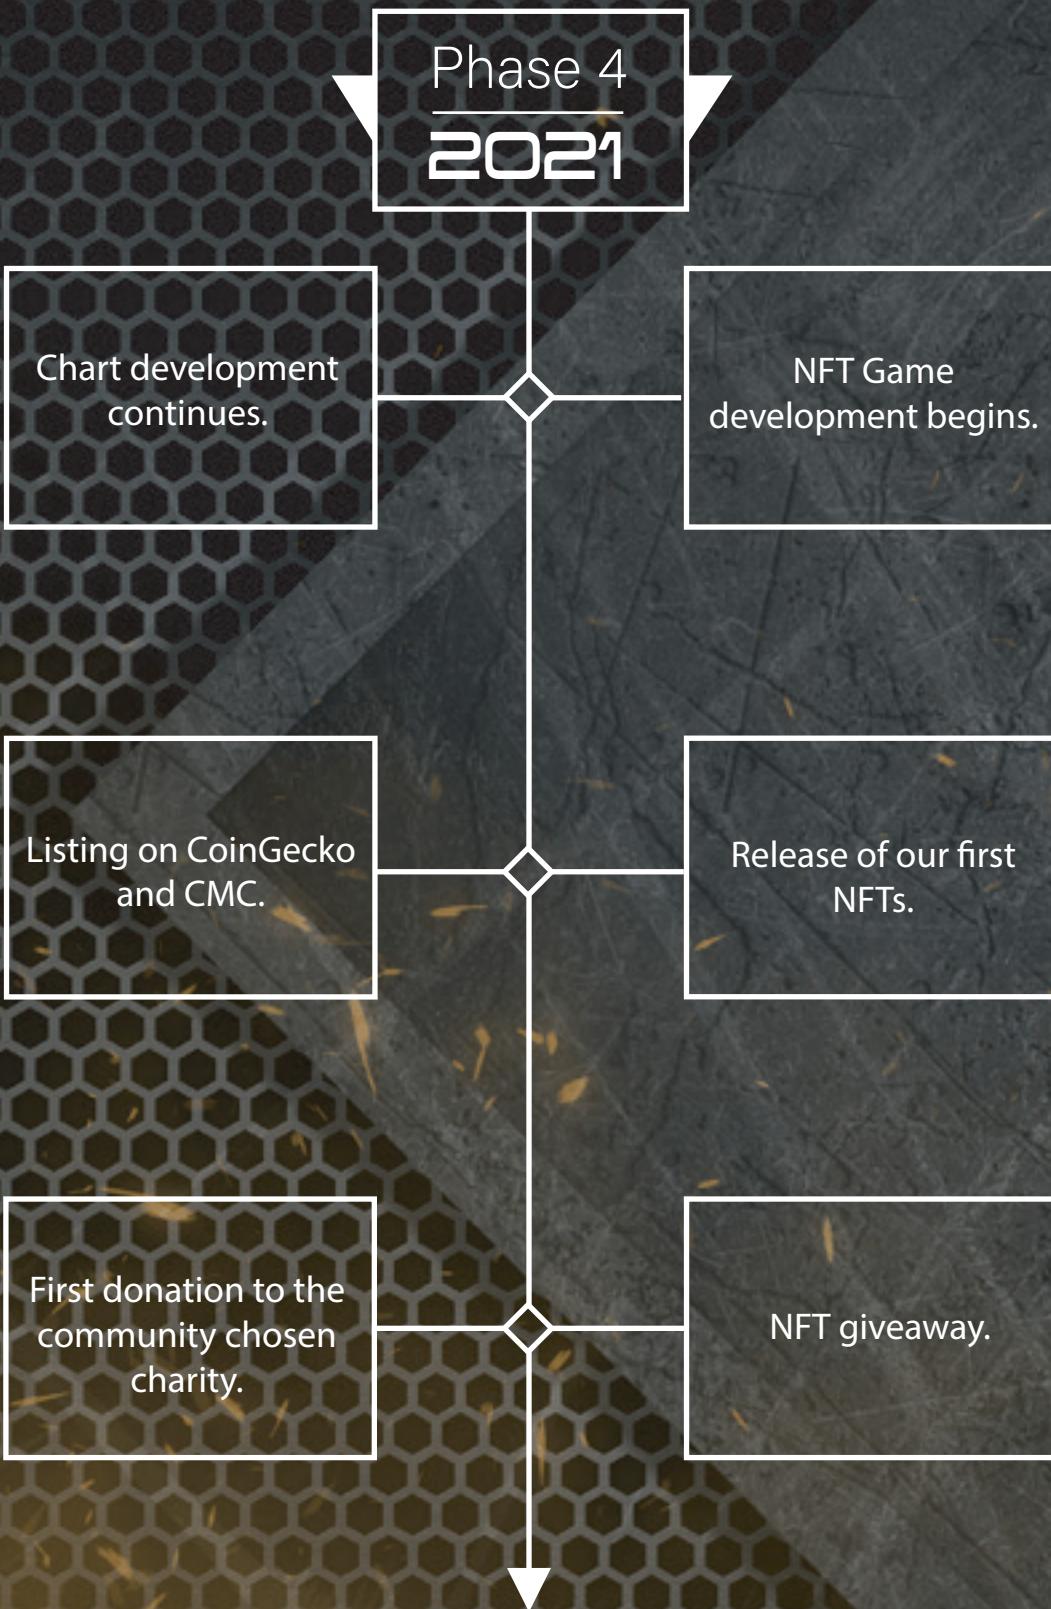

The Prometheus team supports worthwhile causes. Accumulated rewards in the charity wallet will be given to charities that the community decides on – this will be done through democratic voting, such as polls verified by our team. The number of tokens held by investors will affect the power of the vote.

Our Roadmap

Phase 3
2021

Website and social media platforms will be made publicly available.
.

Pre-launch marketing starts.

Trading will be made available upon the fair launch of the contract.

Multi-platform marketing campaigns and rewards competitions begin.

Applications for listings on smaller coin aggregators.

Development of our first NFTs.

Giveaways to our community.

Community choice of our first charity donation.

Our Roadmap

Phase 4
2021

Chart development continues.

NFT Game development begins.

Listing on CoinGecko and CMC.

Release of our first NFTs.

First donation to the community chosen charity.

NFT giveaway.

Our Roadmap

Phase 1
2022

Cross-chain exchange development continues.

Alpha of our game is released for testing and bug reports.

Merchandise is produced and distributed.

2nd community choice charity poll or vote.

Giveaways to our community.

Finalize development of our game to include custom NFTs, including variant skins.

Our Roadmap

Phase 2
2022

NFTs continue to be produced on ERC-20.

Release of our charts in full.

Release of the completed game, with in-game purchases using our native token.

Giveaways to our community.
